PROFESSIONAL SUMMARY

Analyst who builds data tools end-to-end: a supply company's centralized sales database and **executive dashboards now used daily by management**, the **reporting layer of its funded home-services venture**, and **live P&L reporting for a villa rental business**. BS IT (Business Analytics), Google-certified in Analytics and Ads Measurement.

RELEVANT EXPERIENCE

Developer (Freelance) — Booking, Finance & Reporting Platform *Aug 2026 – Present*

Malaya Villas — private villa rental business, 10 villas (malayavillas.com)

- **Moved the business's finances off Excel** — imported each villa's booking and cash-flow workbook, reconciled it line by line, and led the Oct 1 switch-over that made the new system the record for all 10 villas.
- **Built the owner's reporting** — per-villa monthly P&L matching their own workbooks, breakdowns down to each receipt, a nightly emailed report, and a CSR performance leaderboard.
- **Kept the numbers trustworthy** — payments and expenses count only once verified, staff see only their villas' data, and every month is crosschecked against the sheets.

Founding Developer (Contract) — Analytics & Operations Platform *Jun 2026 – Present*

PapaFix — funded home-services marketplace under NAM Builders Supply Corp · retained after internship

- **Built the parent company's KPI monitoring board** — scores the CEO's three businesses against a weighted 9-category scorecard, fed live from the sales database, with every score drilling down to its source figures.
- **Own the entire analytics and reporting layer** — PostgreSQL aggregation functions powering executive KPIs, booking-trend and demand charts, technician rankings, and a per-city revenue split with adjustable manager share.
- **Built cross-filtering drill-downs** so one selection re-slices every chart from a single aggregate query.
- **Safeguarded reporting integrity** with a trigger-written, append-only audit trail and a 292-case test suite.

IT Intern / Systems Developer (Data & BI Focus) *Feb 2026 – Apr 2026*

ALM Management Services & NAM Builders Supply Corp

- Replaced a week of cross-department spreadsheet compilation per report with on-demand executive dashboards, designing the company's **first centralized sales database** and BI reporting layer — now monitoring ₱1M+ in monthly sales.
- Wrote a MySQL→PostgreSQL migration pipeline preserving years of production records — parsing currency-formatted values, normalizing malformed dates, and correcting timezone handling.
- Built a unit-tested pricing and margin engine (income, markup/margin solvers, withholding tax) so dashboard figures reconcile with finance's numbers.

EDUCATION

BS in Information Technology — Major in Business Analytics *Graduated July 2026*

Batangas State University

TECHNICAL SKILLS

- **Data & Analytics:** SQL, data modeling, dashboards & visualization (Recharts), Power BI, Excel, Python, Google Analytics
- **Databases & Data Engineering:** PostgreSQL (Supabase), MySQL, ETL scripting, data cleaning & validation, REST APIs
- **Data Quality & Testing:** Unit-tested calculation logic (Vitest), test case design, data validation, UAT
- **Tools:** TypeScript/JavaScript, React, PHP, GIS mapping, Git/GitHub, VS Code, Figma, Claude Code, Gemini

ACADEMIC PROJECTS

Client Management & Analytics Portal — Capstone Project *May 2025 – Dec 2025*

Client: PDAO, City of Sto. Tomas — under a Memorandum of Agreement with the city government

- Designed the schema and validation rules for a constituent-records portal (PHP, MySQL), with demographic reporting and a GIS module mapping records across the city's 30 barangays.

CERTIFICATIONS

- **Google Analytics & Ads Measurement** (Google, 2025)
